Re: Call for Submissions – Application A1247; D-allulose as a Novel Food

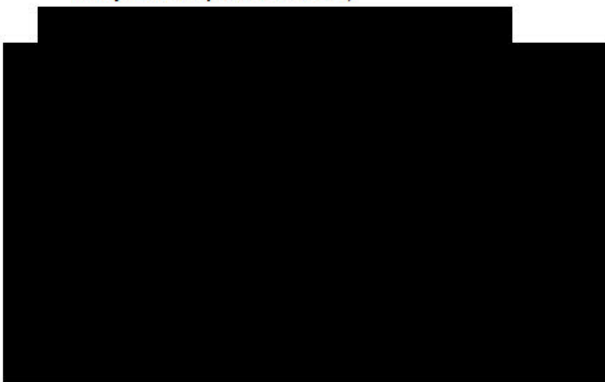

Dear Sir or Madam,

The Calorie Control Council (CCC) is responding to the call for submissions regarding an application made by Samyang Corporation to amend the Australia New Zealand Food Standards Code to permit D-allulose from enzymatic conversion of fructose by D-psicose 3-epimerase (EC 5.1.3.30) from immobilized *Microbacterium foliorum*. CCC is an international association of manufacturers of low-calorie foods and beverages, including suppliers of low- and no-calorie ingredients such as D-allulose.

CCC supports the application that D-allulose be added to foods as a low-energy substitute for conventional sugar ingredients. D-allulose is a safe food ingredient that is permitted for use in foods in the United States and other countries. D-allulose has been recognized as a generally recognized as safe (GRAS) ingredient by the U.S. Food and Drug Administration (FDA) with letters of no objection between 2012 and 2023. Since its use began on the market, there have been no adverse event reports, and this supports that D-allulose is a safe ingredient for use in foods. CCC supports the FSANZ assessment conclusions, which determined safety of use of D-allulose as a sugar replacer ingredient.

CCC appreciates the opportunity to comment on this proposal and welcomes any questions you may have.

Respectfully submitted,

Response ID ANON-789J-4JGM-4
