

FOOD RECALL

Elecare, Similac and Alimentum infant formula products

Abbott Australasia Pty Ltd and Abbott US are conducting a precautionary recall of some EleCare, Similac and Alimentum infant formula products manufactured in Abbott's Sturgis plant in the United States. The products are available nationally through prescription at pharmacies, hospitals and via direct mail order.

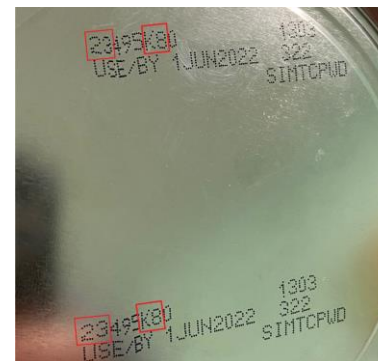

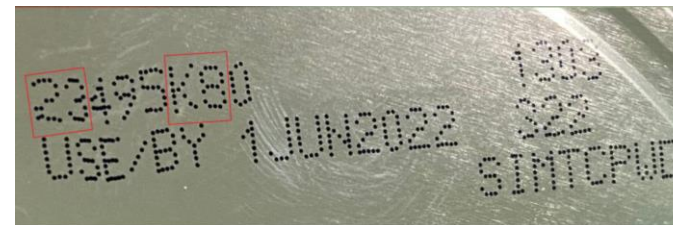

Problem: The recall is due to potential microbial contamination (Cronobacter and Salmonella).

Food safety hazard: Food products contaminated with Cronobacter or Salmonella may cause illness if consumed.

What to do: Parents and caregivers should change to a suitable alternative product as soon as possible. Cease feeding the affected product once an alternative has been sourced. Medical advice on alternative products can be sought from your treating doctor.

The recalled products can be identified by the 7 to 9 digit code and expiration date on the bottom of the package (see images). The affected products are marked with:

- a code that starts with two numbers between 22 and 37 and
- a code on the container that contains K8, SH, or Z2, and
- has an expiration date is 1 April 2022 (APR 2022) or later.
