Food derived from insect-protected soybean MON 87701 Application A1035 – Assessment

I wish to make a submission for the above three products being considered for approval.

I am aware that FSANZ has no safety concerns regarding the use of the above gm products in our food chain, this is why you will approve them.

As a concerned consumer I do have concerns about the use of foreign gm materials in my food and so do not want to eat them under any conditions.

Labelling of these foods is virtually non-existent leaving consumers without the ability to make informed choices about consuming these materials.

Anna Clements
