**Subject:** submission re GM corn-Application A1097

## Call for submissions – Application A1097 Food derived from Herbicide-tolerant and Insect-protected Corn Line MON87411

I vote for a future without GM foods – grown organically. Our soil is already in trouble – what are you people thinking !!! I will not eat anything at risk of being GM – i no longer buy food in a packet unless it specifically says GM free. I buy as much organic options as I can source. Grass fed meat etc. 4 Real Milk . I avoid so called American “food” like the plague. I will return to europe to live if you contaminate our food chain. I refuse to buy GM animal feed & mix my own horse feeds to ensure it. The people DO NOT want this. Tell Monsanto where to shove it – no one wants it. The sooner they fold the better.

As for providing scientific evidence against this proposal – HOW when monsanto has refused access to independent researchers?? & cherry picks the research it does publish?. The european governments have said no – so should we.

regards,  
Karen Tough
