Submission Text:	<p>All gene technology must be regulated and labelled. Gene editing, CRISPR, GM rootstock grafting, cisgenesis, intragenesis, RNA interference and null segregants these all fit under the label genetic engineering. The Gene Technology Act 2000 defines gene technology as "any technique for the modification of genes or ther genetic material". It must all be regulated and labelled as we all have a right to know what we are eating and to make choices about what we eat.</p>
