As an individual, I support the development of Option 1 to prepare a draft variation to Standard 4.2.4 to permit raw milk products.

It is my belief that raw milk products are intrinsically safe, given that no fatalities have been attributed to the consumption of raw milk, in the last forty years. Given that Australia has on average, 120 deaths per year from food poisoning, the risk posed to public health from raw milk, particularly when handled under hygienic conditions, is, I believe, minimal. I support the introduction of raw milk products. Thankyou.
