

Attachment D

Amendments that could not be dealt with under the minor procedure – Proposal P1025

Code Revision

Issue	Response
Description of plant sterols—consistent use	New provisions
Additive permissions and naming provisions	New provisions
Phylloquinone—permitted form of Vitamin K in formulated meal replacements The Schedule to Standard 1.1.1 is to be amended to make it clear that Phylloquinone is a permitted form of Vitamin K.	Phylloquinone is a permitted form of Vitamin K for infant formula products and foods for infants, but not for foods for special medical purposes. Prior to P149 it was noted as a permitted form of Vitamin K. See Schedule S30.06 and section 2.141
Correction of specification for finely ground oxidised polyethylene powder	Corrected, in Schedule 3 S3.22 Note
